DA: Domain Authority (DA) is a search engine ranking score developed by Moz that predicts how likely a website is to rank in search engine result pages (SERPs). Domain Authority scores range from one to 100, with higher scores corresponding to a greater likelihood of ranking

PA: Page Authority (PA) is a score developed by Moz that predicts how well a specific page will rank on search engine result pages (SERP). Page Authority scores range from one to 100, with higher scores corresponding to a greater ability to rank.

SS: Spam Score is a metric developed by Moz that indicates the likelihood of a website being penalized or deindexed by search engines based on certain spammy factors. It ranges from 1% to 100%, with higher scores suggesting a greater risk of being flagged as spam.

CONTENT

Unique content is playing a vital role in website ranking. The more quality content you publish, the more chances you get to rank for keywords across your entire site. Content provides information and this information can be used to educate search engines about your website. High-quality website content enhances usability and the website will become more visible on search engines.

I have analyzed the website's content and found that it is missing various SEO aspects. The content needs to be optimized for SEO, with some natural keyword integration. We also need to add some pages for a better topical authority over the competitor. Adding relevant, well-structured content and FAQs will enhance SEO visibility and user engagement.

Recommendations:

1. Homepage Content

Hero Section:

- Add a rotating tagline with emotional hooks: **"Where Mountains Meet Memories" / "Your Himalayan Adventure Starts Here"**
- Include a brief value proposition (2-3 lines) explaining what makes you different from other tour operators

Social Proof Section (Critical Missing Element):

- Include **"Trusted by 500+ Happy Travelers"** type statistics
- Show recent bookings: **"Rahul from Delhi just booked Manali Package"**

2. About Us Page Enhancement

Currently vague - make it more specific:

- **Founder's Story:** Why you started MilesOnWheel, your personal connection to Himachal
- **Team Credentials:** Years of experience, local expertise, number of trips conducted
- **Safety & Licensing:** Tourism licenses, insurance details, safety protocols
- **Your Values:** Sustainable tourism, supporting local communities, eco-friendly practices

3. Destination Pages - Add Rich Content

For each destination (Manali, Shimla, etc.), include:

- Best Time to Visit with month-by-month breakdown
- How to Reach (by air/train/road from major cities)
- Local Culture & Cuisine - what to eat, local customs

- Hidden Gems - places tourists usually miss
- Budget Breakdown - approximate daily costs
- Packing Guide - what to bring for each season
- Sample Itinerary - day-by-day visual timeline
- FAQ Section specific to each destination

4. Package Pages - Make Them Comprehensive

Each package should have:

- Detailed Inclusions/Exclusions clearly listed
- Day-by-Day Itinerary with timings and activities
- Accommodation Details with photos and star ratings
- Meal Plan specifics (breakfast, lunch, dinner)
- Transportation Details (vehicle type, AC/non-AC)
- Flexibility Options (customization possibilities)
- Cancellation Policy clearly stated
- Group vs Private Tour options and pricing
- Add-on Activities with prices (paragliding, river rafting, etc.)
- Photo Gallery from previous trips

5. Blog Content Strategy

Replace generic titles with SEO-focused, helpful content:

Current: "The Ultimate Himachal Travel Guide"

Better:

- "Himachal in Winter: 10 Things Nobody Tells You Before Booking"
- "Manali vs Shimla: Which Should You Choose in 2025?"
- "15 Instagram-Worthy Spots in Spiti Valley (With GPS Coordinates)"
- "Budget Breakdown: How Much Does a 5-Day Himachal Trip Really Cost?"
- "Solo Female Travel in Himachal: Safety Tips & Best Destinations"
- "Permit Guide for Rohtang Pass, Spiti & Ladakh [2025 Updated]"
- "10 Local Himachali Dishes You Must Try (And Where to Find Them)"
- "Best Trekking Routes in Himachal for Beginners"

6. Create New Essential Pages

Travel Tips Page:

- Altitude sickness prevention

- What to pack season-wise
- Money/ATM availability in remote areas
- Mobile network coverage
- Emergency contacts

FAQ Page (categorized):

- Booking Process
- Payment & Refunds
- What's Included
- Weather & Best Time
- Safety & Health
- Permits & Documentation

Photo/Video Gallery:

- Organized by destination
- Real photos from your tours (not stock images)
- Customer photos with permission
- Short video clips

Why Choose Us Page:

- Local expertise advantage
- Transparent pricing (no hidden costs)
- 24/7 support during trip
- Flexible customization
- Small group sizes for better experience

7. Content Tone & Voice

Your current content is professional but bland. Consider:

- More conversational, friendly tone
- Use storytelling: "Imagine waking up to snow-capped peaks..."
- Add personality: local insights, insider tips
- Use active voice and vivid descriptions
- Include emotional triggers: adventure, peace, escape, memories

8. Trust-Building Content

Safety & Standards Section:

- COVID protocols (if still relevant)
- Vehicle maintenance standards
- Driver experience and verification
- Emergency response procedures
- Insurance coverage details

Certifications Display:

- Tourism department registration
- Safety certifications
- Awards or recognition
- Partner hotels/vendors credentials

9. Interactive Content Ideas

- Trip Cost Calculator: Users input dates, people, preferences → get estimate
- Destination Selector Quiz: "Find Your Perfect Himachal Destination"
- Visual Itinerary Builder: Drag-and-drop trip planner
- Live Weather Updates for each destination
- Availability Calendar showing booked vs available dates

10. SEO-Optimized Service Pages

Create dedicated pages for:

- "Corporate Team Outings in Himachal Pradesh"
- "Honeymoon Packages in Manali & Shimla"
- "Family Tour Packages Himachal"
- "Budget Backpacking Trips Himachal"
- "Luxury Himachal Tours"
- "Weekend Getaways from Delhi/Chandigarh"

11. Comparison Content

People love comparison guides:

- "Manali vs Kasol: Which is Better for You?"
- "Summer vs Winter: Best Time for Himachal Trip"
- "Private Car vs Group Tour: Pros & Cons"
- "Hotel vs Homestay: What Suits Your Travel Style"

12. Urgency & Scarcity Elements

Add content that creates FOMO:

- "Only 3 slots left for December departures"
- "Early Bird Discount: Book 30 days in advance"
- "Monsoon Special: 20% off on all packages"
- Recent booking notifications

Content length should be 1000 words above by focusing on targeted keywords in the content. Content should be a combination of less informational + more promotional.

Duplicate Content

Duplicate content confuses search engines, making it hard to figure out which page to show in search results. Imagine you have twins saying the same thing—confusing, right? Search engines want to provide diverse results, so if a website has the same content on multiple pages, it's like seeing double. This can lead to lower rankings and less visibility for the site. Unique content helps search engines understand and prioritize, boosting a website's chances of being seen by more people.

- Your Website contains 25% duplicate content. (We can ignore the Header & footer containing duplicate Content; it remains the same for all pages)

NO INDEX TAG

A **no-index tag** is an HTML tag that tells search engines not to index a specific webpage, keeping it out of search results. It's used for private content or pages you don't want to appear in search engines.

NO index tag issue was not found on your website. All Good.

KEYWORDS DENSITY

Keyword density tells you how often a search term appears in a text in relation to the total number of words it contains.

Your website's content needs slight optimization as keyword usage is not fully aligned with target terms. It's recommended to adjust the content slightly according to keywords for better on-page SEO and relevance.

For example, for 100 words of content, there should be 2-3 keywords in the content.

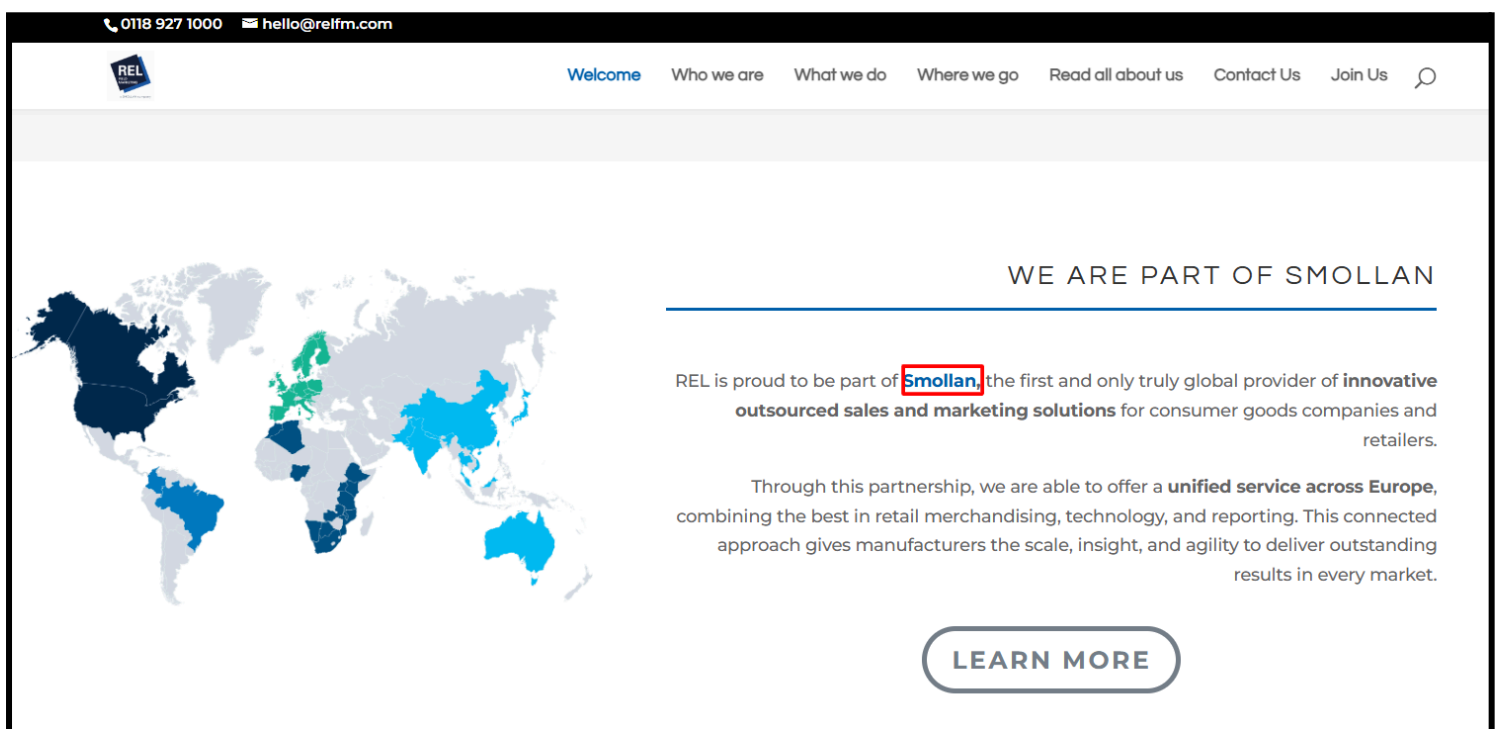

INTERNAL LINKING

Interlinking is very important when it comes to SEO. Internal links connect your content and give Google an idea of the structure of your website. They can establish a hierarchy on your site, allowing you to give the most important pages and posts more link value than other, less valuable, pages. So, using the right internal linking strategy can boost your SEO.

Anchor text-based internal linking is not present on your website.

Example-

- <https://relfm.com/>

CANONICALIZATION ISSUE

Canonical issues most commonly occur when a website has more than one URL that displays similar or identical content. They're often the result of not having proper redirects in place. Due to this issue duplicate content and landing page issues were raised.

For example:

<https://www.milesonwheel.com/> and <https://milesonwheel.com/> resolve to the same URL.

- Which is Good.

ROBOTS.TXT FILE

The robots.txt file tells web robots (like search engine crawlers) which parts of a website they're allowed to visit and index. It helps manage how search engines access and display website content, improving website visibility and ensuring sensitive information isn't indexed unintentionally.

Your website does not contain a robots.txt file.

Robots.txt file: <https://www.milesonwheel.com/robots.txt>

404: NOT_FOUND

Code: `NOT\_FOUND`

ID: `bom1::b7brs-1766854170719-ae242ec6a8a6`

[Read our documentation to learn more about this error.](#)

SITEMAP FILE

A sitemap is a file where you provide information about the pages, videos, and other files on your site, and the relationships between them. Search engines like Google read this file to crawl your site more efficiently.

Your website does not contain a sitemap.xml file.

Sitemap.xml: <https://www.milesonwheel.com/sitemap.xml>

404: NOT_FOUND

Code: `NOT\_FOUND`

ID: `bom1::b7brs-1766854170719-ae242ec6a8a6`

[Read our documentation to learn more about this error.](#)

SCHEMA MARKUP

Schema markup (schema.org) is a structured data vocabulary that helps search engines better understand the information on your website. When search engines recognize the meaning and relationships behind entities, they can serve rich results or rich snippets.

Your website has a Local business and Organization Schema present. However, we need to add more schema types like, Faq schema, Blog schema.

BLOG/ News Page

Blogging allows you to share information about your business products and its services but it also allows you to share opinions and thoughts on certain topics. Blogging is a great way to create a personality for your company and makes your business more credible and approachable. Blogs help nurture existing relationships, reach new customers, and drive traffic to your website.

- Blog helps increase traffic and engagement on the website by 40%.

Your website has a blog page. But it's not placed anywhere on the front of the website. Which can SEO.

Recommended Actions to Improve Blog SEO & AI Visibility

1. Publish Fresh, Consistent Content

- Aim for **2–4 new blog posts per month**.
Focus on **current industry trends, care tips, and client-focused advice**.
- Include recent stats, updated facts, and the current year (e.g., *Live-in Care Trends in 2025*).

2. Use Question-Based, Conversational Titles

- Example: “What Are the Benefits of Live-In Care for Seniors?”
- This approach aligns with the natural-language queries that trigger **Google AI Overviews**.

3. Add FAQ Sections Within Blog Posts

- Include **2–4 common questions** users might ask about the topic.
- Use **FAQ Schema (FAQPage JSON-LD)** for better AI readability and featured snippet eligibility.

4. Structure Posts for Quick Answers

- Start each blog with a short summary paragraph answering the main question directly.
- Use bullet points, short paragraphs, and descriptive subheadings for readability.

5. Enhance Topical Depth with Related Queries

- Add “People Also Ask” style subheadings and concise answers.
- Helps Google understand topic relevance and boosts AI Overview visibility.

6. Strengthen E-E-A-T (Experience, Expertise, Authority, Trust)

- Include **author bios**, credentials, and links to credible sources.
- Showcase real experience and authority in the care industry.

7. Add Internal Navigation & Related Content Links

- Include “**Related Posts**”, “**Next/Previous Post**”, or “**You May Also Like**” sections.
- Improves user engagement, reduces bounce rate, and enhances internal linking.

8. Use Schema and Structured Markup

- Add **Article**, **FAQ**, and **HowTo** schema where applicable.
- Makes it easier for Google’s AI to understand and feature your content.

9. Update and Republish Old Posts

- Review older articles from 2022 and earlier.
- Refresh with updated information, links, and visuals to regain ranking potential.

10. Add Key Takeaway or Summary Sections

- End each post with **3–5 bullet-point takeaways** summarizing the content.
- AI Overviews often extract content from clearly formatted summaries.

CALL TO ACTION BUTTON

A call to action (CTA) is a prompt on a website that tells the user to take some specified action. A call to action is typically written as a command or action phrase, such as 'Call now' or 'Get a quote' and generally takes the form of a button or hyperlink.

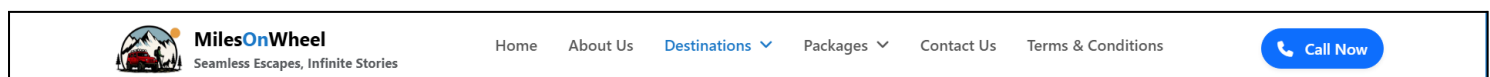

CTA buttons are present on the website, but we need to optimize CTA buttons.

Header and Footer Optimization

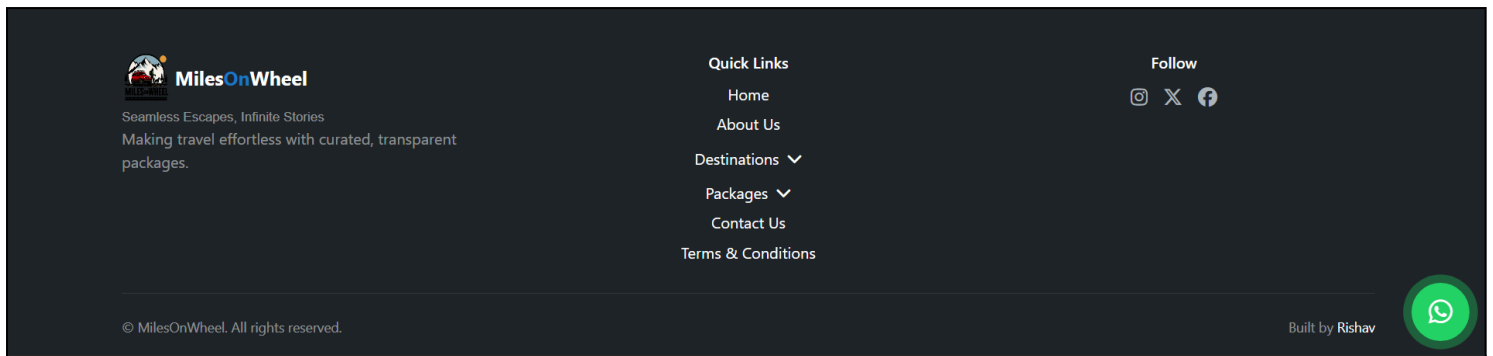

Headers help organize and navigate a website, like chapter titles in a book. Footers summarize important stuff, like a book's index. Optimizing them makes the website easier to use and helps it show up in internet searches, like making a book more enjoyable and findable for readers.

The header and footer sections are in place, which is good. However,

Your website Header -

Your website Footer -

CUSTOM 404 ERROR PAGE

A 404 is a standard http response code for a resource that cannot be located on the server. Web Servers usually return a "404 Not Found" error page for non-existing pages. Unfortunately, these default error pages are very generic and not very user-friendly, therefore, using a custom 404 error page is highly recommended.

A custom 404 Page is not present on the Website.

Irrelevant pages

“Irrelevant pages” refer to web pages or content sections that do not directly answer a user’s query or align with the main purpose of a website. These pages can appear in search results or within the site’s structure, creating confusion and diluting content focus. Identifying and removing such pages is essential for improving search relevance, maintaining a clear content strategy, and enhancing user experience by keeping the website focused, coherent, and free of distractions.

Your website does not have any irrelevant page.

FAQ Section

The FAQ page is a place for visitors to easily find answers to their questions in one place. It will improve the user experience by making it easy to find what they are looking for rather than search the site. It’s not only good for users but for search engines too. Search Engines will get more content to crawl and it will improve the visibility of your website.

Your website currently has FAQ sections missing on **package pages and the home page**. Adding these will improve user experience and SEO. You can also create a **dedicated FAQ page** to address common customer queries and boost search visibility.

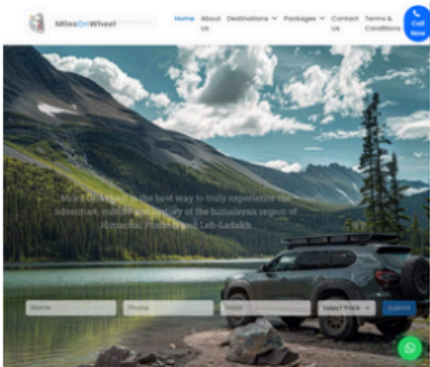

WEBSITE SPEED

As you may already know, website speed is an important factor for the usability of a website, as well as for SEO. A slow website will deter users and force them to use your competition instead. This is the primary reason that it is one of Google's key search algorithm factors. According to studies, 40% of internet users will abandon a website if it takes longer than 3 seconds to load.

META TITLE

Meta Title Tag shows in the Search engine as snippets (brief) of the particular webpage.

Meta Titles should adhere to the following guidelines:

- Be unique and relevant to that page.
- The ideal length for the Meta title is 50–60 characters. Google starts to cut off the title tag after 50-60 characters.
- Use the keyword once per sentence, as close to the start of each sentence as possible.
- It is best practice to add at least one keyword in Meta-Title.

Below 30 characters:- 17 Pages

Pages With Meta Titles issues

META DESCRIPTION TAG

Meta descriptions are shown in the Search engine as snippets (brief) of the particular webpage.

Meta descriptions should adhere to the following guidelines:

- Be unique and relevant to that page.
- Be written as descriptive ad text, with a call to action.
- No more than 160 characters in length including spaces and punctuation (140-150 is ideal! but no less than 51 characters (Google considers 50 characters or less to be too short!
- Contain 1-2 complete sentences with correct punctuations and no more than 5 commas.

Duplicate % Below 70 Characters:- 19 Page

Missing :- 2 Pages

Pages With Meta Descriptions issues

HEADING TAG

Header tags, also known as heading tags, are used to separate headings and subheadings on a webpage. They rank in order of importance, from H1 to H6, with H1s usually being the title. Header tags improve the readability and SEO of a webpage.

Missing H1 :- 1 Pages

Multiple H1 Tag - 1 Page

[Pages With H1 Tags Issues](#)

IMAGES ALT TAG & ALT TEXT

Alt text or alt tag is like a label for pictures on websites. It helps blind people understand what's in the pictures by using special tools. It's important because it makes websites more inclusive for everyone. Alt text also helps search engines understand the content, making it better for showing up in search results. If pictures don't load, alt text provides a description, improving the overall experience.

Missing Alt Text :- 10 Images

Over 100 kb :- 101 Images

[Images Issues](#)

CANONICAL TAGS

A canonical tag is a signal in a web page that simply says: "I'm a copy of this other web page which can be found over there. This HTML element is added to the code of a page and helps prevent duplicate content issues by telling Google and other search engines the preferred version of a page.

Your website has a canonical tag. However there's a canonical issue due to the two versions of homepage url. Need to fix immediately to make it an indexable canonical.

BROKEN LINKS

Broken links on a website are hyperlinks that no longer lead to valid or accessible web pages, negatively impacting user experience and SEO performance. Regularly checking and fixing broken links is crucial for maintaining a functional and user-friendly website.

We found 4 broken Links

[Pages with Broken Link](#)

URL REWRITING

URL rewriting is the process of modifying the URL structure of a web application to make it more user-friendly and easier to read, often used for SEO purposes. It typically involves mapping a more readable URL to an internal URL structure via server configuration or application code.

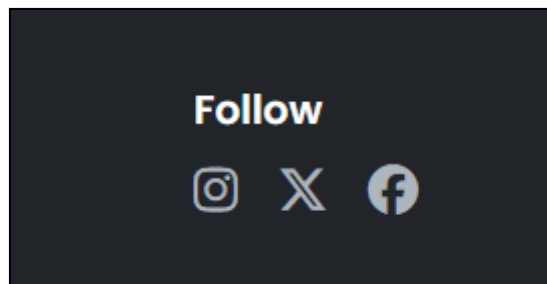

Url rewriting is required as most of the urls are not SEO Friendly.

SOCIAL MEDIA

Social Media plays a crucial role in connecting people and developing relationships, not only with key influencers and journalists covering your company's sector, but also provides a great opportunity to establish customer service by gathering input, answering questions, and listening to their feedback.

Social media helps increase the brand visibility on Google, increasing engagement and more.

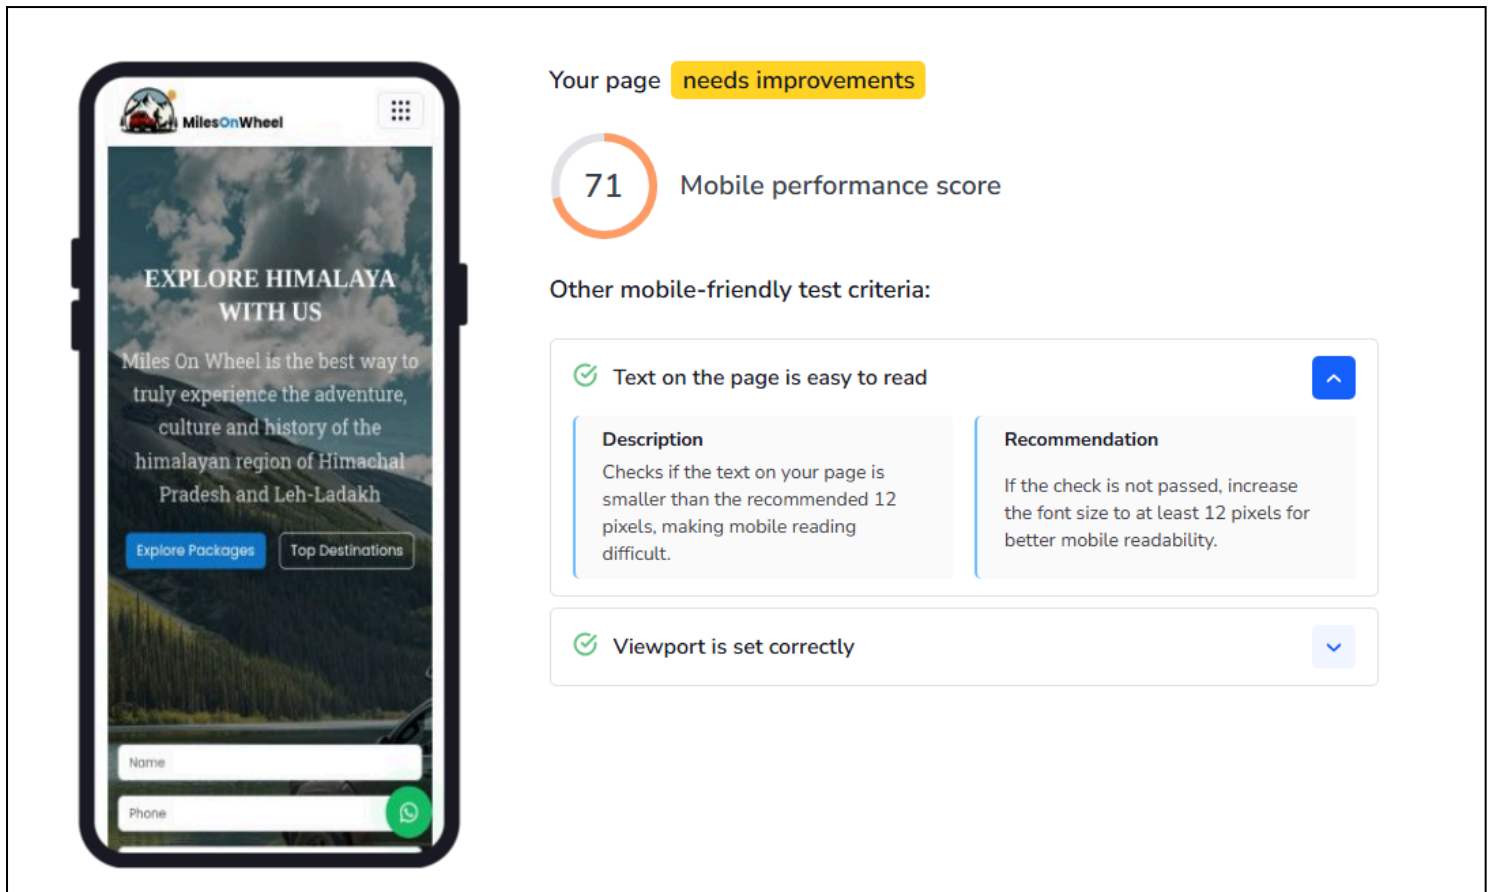

Your website has social media sharing and follow buttons.

MOBILE FRIENDLY

A mobile-friendly website is one that is designed to work the exact same way across devices. This means that nothing changes or is unusable on a computer or mobile device. Features like navigation drop-downs are limited, as they can be difficult to use on mobile.

Your Website's performance on mobile is average.

Favicon

A favicon is a small icon displayed in a web browser's address bar or tabs to represent a website. It helps users quickly identify and distinguish between multiple open tabs. The favicon is important for branding and user experience, providing a visual cue that aids in recognizing and navigating to a specific website among others.

-Your website has a favicon.

Live Chat Button

A Live Chat Button is a small icon or widget on a website that lets visitors connect with the support team in real time. It helps users get instant answers, which builds trust and boosts conversions.

Your website does have a Live Chat whatsapp button.

Website Page Indexing

Website page indexing is like organizing a book – it's the process search engines use to catalog and store web pages. It's crucial because indexing helps search engines quickly find and deliver relevant information when users search. Without proper indexing, websites may not appear in search results, making it difficult for people to discover and access the content they're looking for.

Your Website's only 3 pages are indexed by Google.
